Scope of Services

We pride ourselves with being able to provide all project services “in-house” from conceptualization through construction. Having all of our teams, allow for more effective communication and more efficient work for our clients and our partners. For any services we provide, each project is organized from its inception to its completion, ensuring continuity, punctuality, direct responsibility and client satisfaction.

Moreover, our company have qualified and certified experts to handle various types of Mechanical & Electrical services.

High Tension & Heavy-Duty Electrical Works

This includes electrical cabling, installation of industrial machinery, Horizontal Directional Drilling (HDD) works, underground GI piping, cable mapping and other heavy-duty electrical works. Besides this, we are registered contractor company by local authorities and boards to carry out those electrical works, mainly in non-domestic & industrial projects, and we have licensed experts as well.

Switchgear & Transformer (11kv)

Transformer is a electrical device that transfers electrical energy between two or more circuits through electromagnetic induction and increases or decreases alternating voltages in electric power applications. We supply and install transformer for our client's structure especially for industrial structure which needs higher voltages for routine operation in order to prevent energy loss problem.

External Infrastructure Works

We do construct infrastructure projects that usually refer to public sector projects. We construct technical structures like street lights.

Medium voltage & Low Voltage Electrical Works

This includes LV & MV electrical cabling, GI & PVC piping, installation of electrical equipment, mainly focused on showrooms, apartment & condominium, residential housing development, and commercial buildings.

Genset & Automatic Main Failure (AMF)

We supply and install genset for essential projects like manufacturing factories. Genset is to generate power to overcome any unforeseeable energy disruption, and controlled by AMF panel.

Lightning and Surge Protection System for AC & DC Supply

Factories without Lightning Protection System are facing their risks of machines damaging, data losing, building damaging etc. Moreover, lightning strike is a very common natural scenario as Malaysia is the third highest country in lightning strikes globally, therefore Lightning Protection System is a need more than a want.
